Which of these hidden skills do you have?

- Doing Taxes: 8
- Bicycle Repair: 15
- First Aid: 2
- Sewing: 5
- Ikea furniture assembly: 18
- Tying a tie: 14
- Using a fire extinguisher: 3
- Opening a beer bottle with a lighter: 17
I work within the following framework

- **Student Body**: 3
- **Scientific Community**: 5
- **Government & Policy**: 5
- **Provider/Operator**: 2
- **Research Organisation**: 7
- **HEI (Administration & IT)**: 2
- **HEI (International Office)**: 3
- **HEI (Management & Strategy)**: 3
My official job title is...
Have you taken part in or used any of the following?

- Digital Credentials Community Briefing: 14 points
- Digital Credentials Regulars: 11 points
- User Workshop: 7 points
- Brown Bag Briefing: 2 points
- Resources on TUM or DAAD website: 11 points
How do you rate these statements?

- The system must be free-of-charge: 4.1
- I want to use a human-readable version of a VC: 3.2
- I want to use multiple identifiers for my education certificates: 2.8
- We need a national central trusted issuer registry: 3.5
Which key message aimed at HEIs and their governance structures should we promote?

- Ease of use by multiple stakeholders.
- Interoperability. VCs in order to become adopted need a common (at least inside the EU) scheme.
- EU Standardization
- Importantly of semantic and technical interoperability with other initiatives at EU level.
- Get your ministries to work and advise them, it's important.
- Simplify (work-) lifess of everyone involved!
- We need standards on every level in Europe.
- VCs work pretty well. More research necessary, but... yeah.
- Possibilities for interconnectivity and interoperability from having machine readable credentials.
Which key message aimed at HEIs and their governance structures should we promote?

- If your HEI cares for Lifelong learning start not just thinking but implementing digital credentials
- Interoperability
  - privacy, ownership of data, learner centricity
  - support end users with credential recovery
- Interoperability also in the metadata of the VC. Based on EU information
- we do not need to agree all on one standard, but we need interoperability via semantic mappings and organisational agreements
- well done ;)

Open technology is a public matter
Do you have any comments or questions regarding our presented Proof of Concept?

- well done! looking forward to see more ^^
- Looks pretty solid so far!
- Interoperability plans are missing
- what are other projects around doing?
- Will you being involving learners more in the PoC (design and experience)?
- What were the limits of ELMO when using it? Did you try to reimport what you exported (roundtrip)
- Vision of an common European eco-system would be nice
- Are there any plans to expand beyond higher education (e.g. upper secondary, VET)?
- Agree on expanding to the entire education cycle, not just Higher Ed
Do you have any comments or questions regarding our presented Proof of Concept?

Thank you for sharing the progress of your project.
Very interesting

One can’t deal with these issues without taking in feedback and comments from all around the globe – it is a mutually enriching process.
What did you learn today?

Too much approaches too few common solutions

Learned from the discussion that data schemas are a big open question on everyone's mind.

Interesting to see the approach relying on SSI

Great work, interoperability stays an important topic, high complexity of stakeholder

We're always looking to the (near) future, so this is making me think about what we'll be seeing next...

Implementation approaches are always interesting (and a bit unique) - thanks for sharing

Storing is an open issue

Great to see what's happening on this agenda in different countries - planning for international interoperability will be important, particularly considering how digital credentials will interact with multinationals.
Anything you would like to add? Have we forgotten anything?

Thanks for your work

Will you share the slides & Menti results?

Thank you very much!

Thank you very much to you all - good work
