

Where are you joining us from today?

As a teenager this is how I listened to music:

I work within the following framework

Project overview

Hans Pongratz & Matthias Gottlieb
Technical University of Munich (TUM)

Let's get to work in Miro!

- Workshop 1: International Compatibility and Regulatory Frameworks
- Workshop 2: Interoperable Standards and Processes within HEIs
- Workshop 3: Trust and Transparency

What did you learn today?

Good info on efforts in Europe

Change is a strong topic

There is much work to do!

We dont have "the solution" yet ready to go. So, good we meet before we get this done by Microsoft, LinkedIn, Google & Co...

Miro can be stubborn

Incredible dedication of people working on this topic.

Problems and their solutions of other Stakeholders

There is a deep concern on credentials world wide

It has always more complexity than we think

What did you learn today?

Great use of Miro for discussion and team group!

Colleagues share the same challenges my organization does.

Different organizations, same challenges, similar solutions.

Different and perspectives on digital credentialing, which is a really fresh point of view.

we need much more exchanges like today

Future about "Digital" HE's

W3C VC is going to be used.

Germans don't seem to talk about Europass

need to be sure that learners are owners of their educational experiences = digital creds

What did you learn today?

standards are key

a lot of challenges

Interesting for a broad community Very similar processes
And tech questions

This is a great community! There a a lot to be done but look
at the achievements so far! Let's build on trust!

many HEIs in Germany already issuing digital credentials
was new to me

complex q ought to have more prep in advance...

You are maybe too concerned by existing regulatory
framework ;)

Trust is at the centre of everything.

A international point of viiew

What did you learn today?

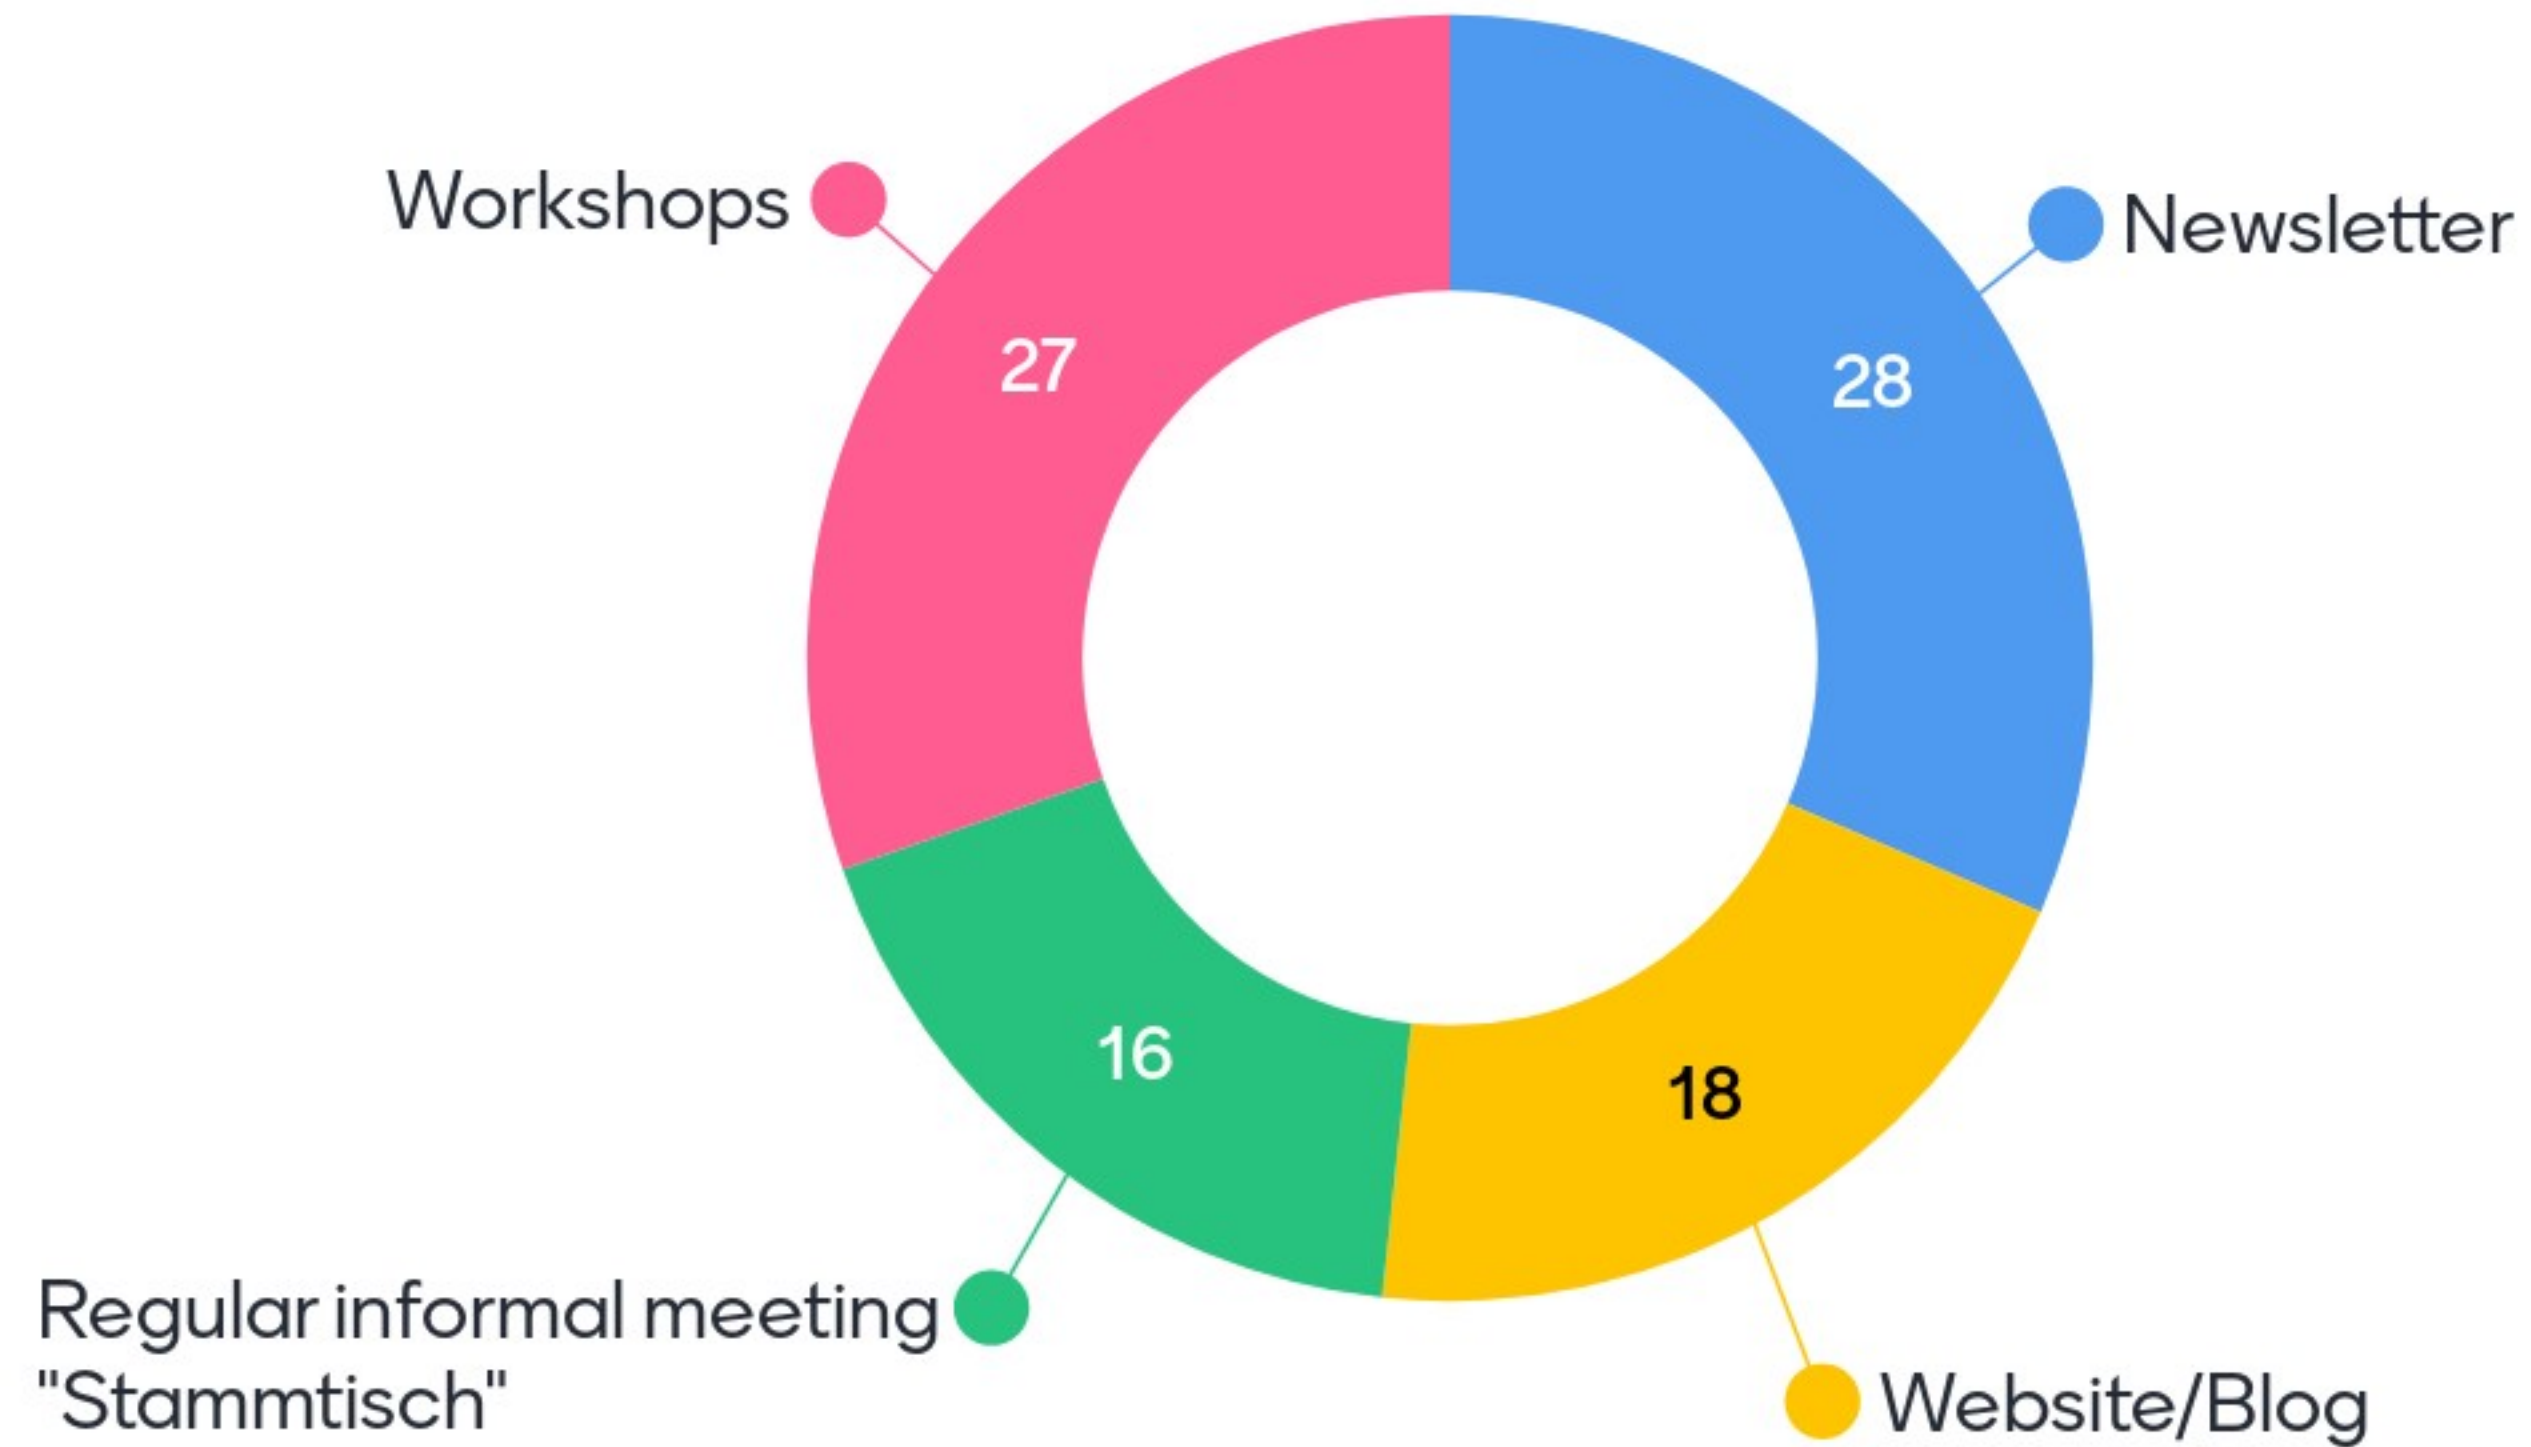

This is a complex and multi-faceted problem, where legal, technical and trust issues have to be solved. Also the different terminologies in different countries make the problem not easier.

more exchange needed

Need to better integrate the rest of the globe. Engage associations and organizations to help that

Challenge remains: don't see a short time solution

How would you like to be informed in future?

Anything else you would like to share with us?

thanks!

Good group. Good conversation.

No, thank you very much for organizing this event!

great workshop!

Thanks for the interesting session!

thank you so much.

Miro is a distraction from the discussion.

Please share all material openly. Thanks.

What has been done within the members of the DCC please?

Anything else you would like to share with us?

more time

Really appriceated the workshop. I hope to see you soon.

Thanks for this organization

Our school needs to start discussing "digital credentials". Looking forward to the slides. Thank you.

Thank you & let's stay in touch!
